

NTSB January Incident Report

This report compares January data from 2007 through January 2025 using official data directly pulled from the National Transportation Safety Board (NTSB) website. Although the numbers are official, this document is not an official government report.

January Comparison (USA)

January Comparison (Worldwide)

January Incident Summary (2007 - 2025)

Year	JAN - USA				JAN - Worldwide			
	Number of	Injuries			Number of	Injuries		
	Incidents	Fatal	Serious	Minor	Incidents	Fatal	Serious	Minor
2025	53	80	18	46	72	87	20	51
2024	60	27	13	10	92	48	19	15
2023	72	20	12	12	105	30	15	14
2022	56	8	9	13	90	16	15	19
2021	52	12	8	10	83	99	12	14
2020	70	35	16	21	99	229	18	26
2019	65	22	11	20	84	39	13	26
2018	69	18	23	13	91	37	28	15
2017	71	21	17	11	90	85	29	11
2016	74	17	18	12	100	46	26	21
2015	74	23	14	29	94	36	20	38
2014	72	13	5	23	87	37	11	26
2013	69	35	7	13	84	82	7	22
2012	63	13	7	11	80	27	7	11
2011	90	19	14	18	112	42	24	31
2010	76	38	9	23	94	139	9	29
2009	88	47	20	16	94	49	20	27
2008	80	31	11	19	98	67	14	38
2007	91	24	14	19	102	130	19	29

Data Analysis and Safety Implications

Analysis:

The official NTSB data from January 2007 through January 2025 reveals a disturbing trend. While January 2025 may record fewer overall incidents than some previous Januaries, a closer examination of the data indicates a significant surge in the severity of these events – particularly in the number of minor, serious, and fatal injuries. The rise in fatalities is especially alarming.

This discrepancy suggests that a simple count of incidents does not fully capture the increased level of danger. In recent years, actions taken during the Trump administration – such as dramatic cuts to FAA staffing and a freeze on federal hiring – along with subsequent policy shifts under Musk, have seemingly contributed to a worrying deterioration in air safety. These measures may have reduced the overall number of reported incidents, but they coincide with a marked increase in the gravity of outcomes when incidents do occur.

In summary, the data underscores that relying solely on incident counts can be misleading; the true risk is better reflected in the rising numbers of severe and fatal injuries. This analysis calls for a deeper investigation into air safety protocols and regulatory oversight.
